Subjectul A. MECANICĂ

Nr. item	Soluţie/Rezolvare
III.a.	
	$E_{c0} = \frac{m \cdot v_0^2}{2}$ $E_{c0} = 12,5kJ$
	$E_{c0} = 12.5kJ$
b.	
	$L_{G} = \vec{G} \cdot \vec{d} = -mgl$ $L_{G} = -0.2J$
	$L_{\rm G} = -0.2J$
C.	
	$\vec{F} = m \cdot \vec{a}$
	$\vec{F} = m \cdot \vec{a}$ $L_t = \vec{F}_{rez} \cdot \vec{d}$ $\Delta E_c = L_t$
	$\Delta E_c = L_t$
	Rezultat final: $a = -2.25 \cdot 10^5 m/s^2$
d.	$\Delta E_c = L_{rez} + L_G$
	$L_{rez} = -4499.8J \cong -4.5 \text{ kJ}$
