Subiectul B. ELEMENTE DE TERMODINAMICĂ

II.a.	
	$p \cdot V = m \cdot R \cdot T/\mu$
	$m = p \cdot V \cdot \mu / R \cdot T$
	Rezultat final: $m_1 = 0.7 \mathrm{g}\mathrm{si}$ $m_2 = 1.6 \mathrm{g}$
b.	
	$v = v_1 + v_2$
	$(m/\overline{\mu}) = (m_1/\mu_1) + (m_2/\mu_2)$ unde $m = m_1 + m_2$
	Rezultat final: $\overline{\mu} = 30,66 \cdot 10^{-3} \text{ kg/mol}$
C.	
	$p = v \cdot R \cdot T_2 / (V_1 + V_2)$
	Rezultat final: $p = 1,25 \cdot 10^5 Pa$
d.	
	$\overline{\rho} = (m/V) = (\rho \cdot \overline{\mu})/R \cdot T_2$
	$\overline{\rho} = (m/V) = (p \cdot \overline{\mu})/R \cdot T_2$ Rezultat final: $\overline{\rho} \approx 0.92 \text{ kg/m}^3$
